

Dear Sirs,
Satellite radio and television offers me an escape from the inane prattering of the local media in my location. I can receive NFL games through DirectTV and both national and international news feeds additionally through XM Radio. The addition of localized content, such as news, weather, and traffic is an added plus to an already valuable service offered by satellite broadcasters.

The lobbying groups built up to advantage outdated technology leveraged by local broadcasters are simply not speaking for an industry that meets my needs for content delivered to my home and vehicle.

Please reject NAB's petition 04-160.

Sincerely,

Brian Korn
